

Are you looking ahead?

Strategies to incorporate low vision into your everyday assessment.

Carmen McClelland
mcclellandcarmen@gmail.com

Objectives

1. Attendees will have a more global understanding of the prevalence of specific visual impairments and what it means for the aging population.
2. Attendees will become aware of the current research around visual impairments and other comorbidities.
3. Attendees will learn about both low tech and high-tech low vision strategies and devices to incorporate into their recommendations.

Financial Disclaimer

I have nothing to disclaim.

Cataracts

- Not considered a low vision impairment because it can be fixed, but it is equally important.
- Leading cause of vision loss in the United States
- Usually starting around 40, proteins clump together and blur vision

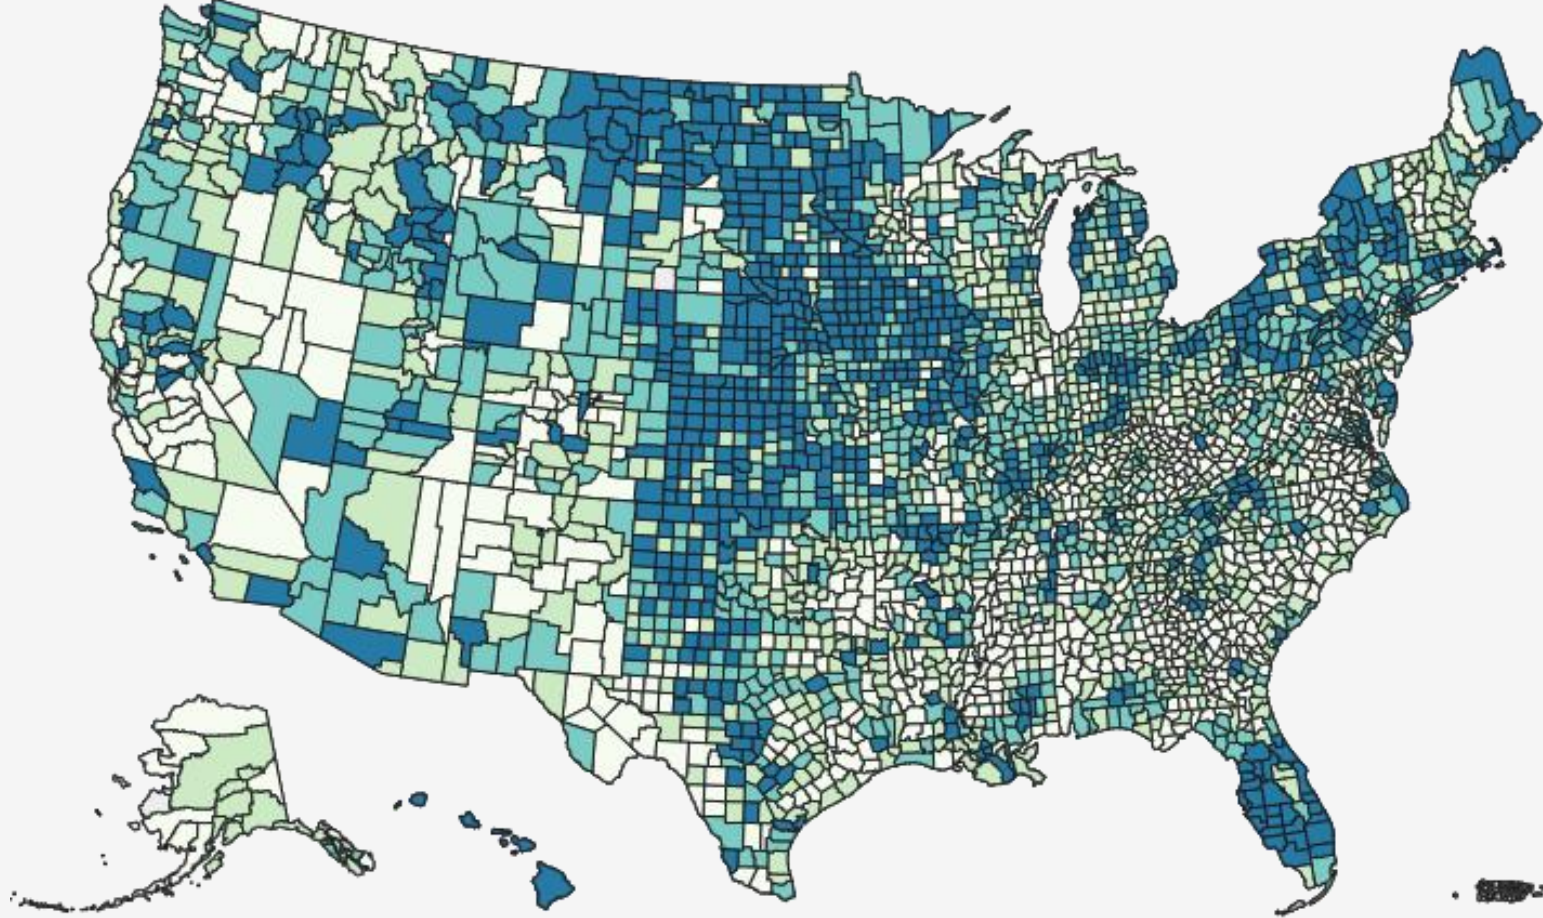

Macular Degeneration

- Leading cause of vision loss for Americans aged 65 and older.
- Economic of both indirect, direct costs, productivity costs of late-stage AMD in Bulgaria, Germany, and the U.S (Paudel et al. 2024)
 - Bulgaria: \$512.5 million
 - Reduced well being 76%
 - Germany: \$8.6 billion
 - Reduced well being 67%
 - U.S.: \$49.4 billion
 - Loss of productivity 43%
- Rates do fluctuate based on race/ethnicity (Fisher et al, 2016)
 - Caucasian
 - Hispanic and Chinese
 - African American

Macular Degeneration Risk Factors

<u>Risk Factors</u>
Smoking
Poor nutrition
Cardiovascular disease
Family history

Legend

○ 5.14 - 9.83

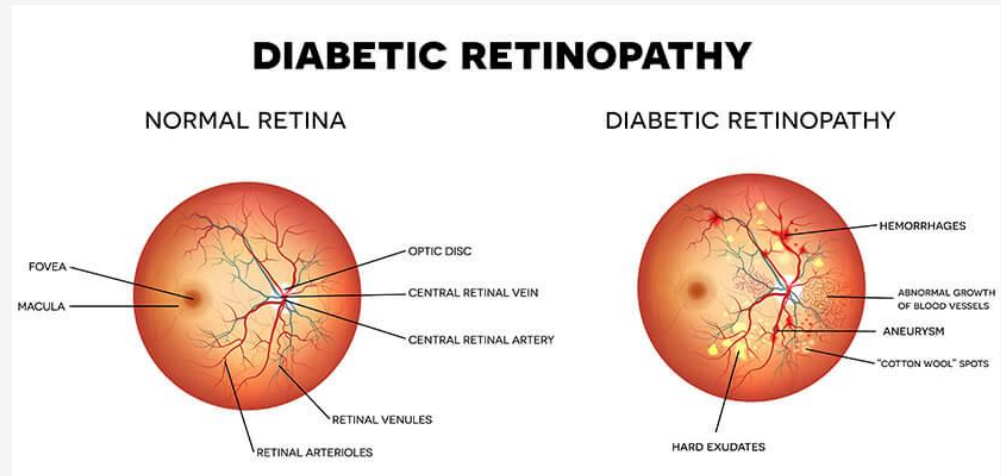

○ 9.83 - 12.14

● 12.14 - 15.16

● 15.16 - 32.57

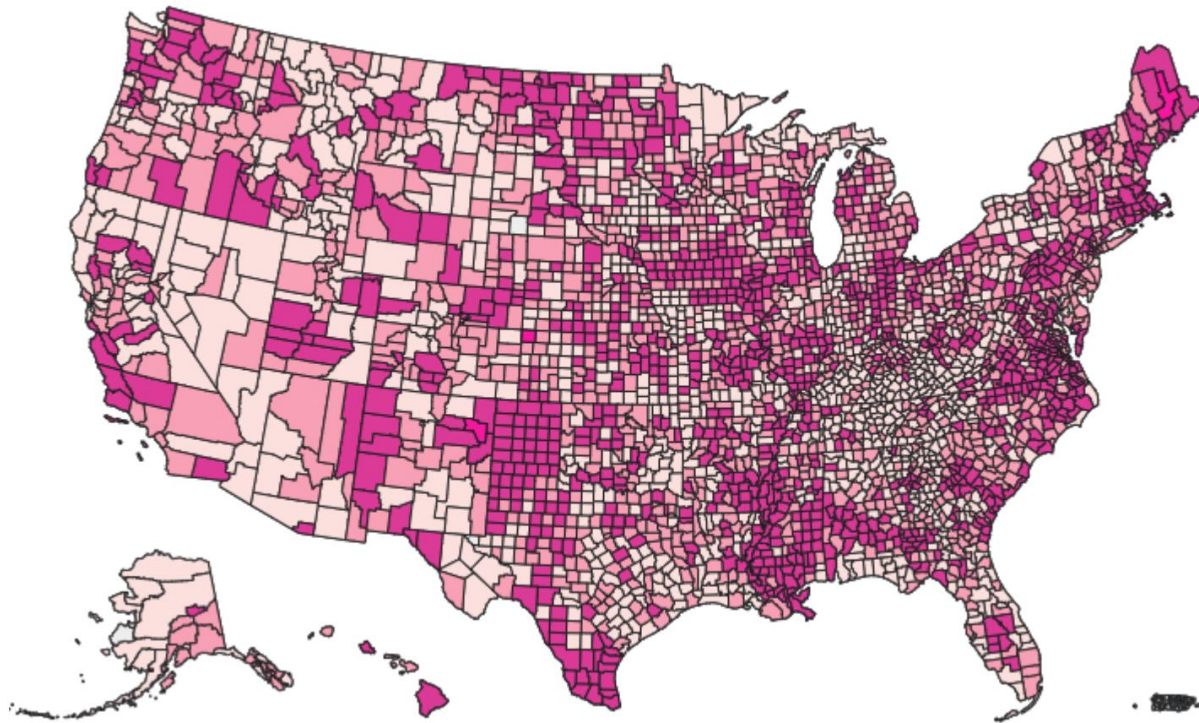

Diabetic Retinopathy

- Leading cause of blindness in American adults
- Nonproliferative retinopathy vs proliferative retinopathy
- Limited symptoms in non-proliferative
- Rates do fluctuate based on race/ethnicity (Wong et al, 2006)
 - African Americans
 - Hispanic
 - Caucasians
 - Chinese

Diabetic Retinopathy Risk Factors

<u>Risk Factors</u>
High blood pressure
Poorly controlled blood glucose levels
High cholesterol
Both type 1 and type 2
Weight management

Legend

14.97 - 23.11

23.11 - 27.68

27.68 - 44.84

Glaucoma

Four types:

- Open-angle glaucoma (most common)
- Vision loss happens slow with cause unknown
- Angle-closure glaucoma, also called closed-angle glaucoma
 - Fluid is blocked and can't get out of the eye. Vision loss happens very quickly
- Congenital glaucoma
- Secondary glaucoma

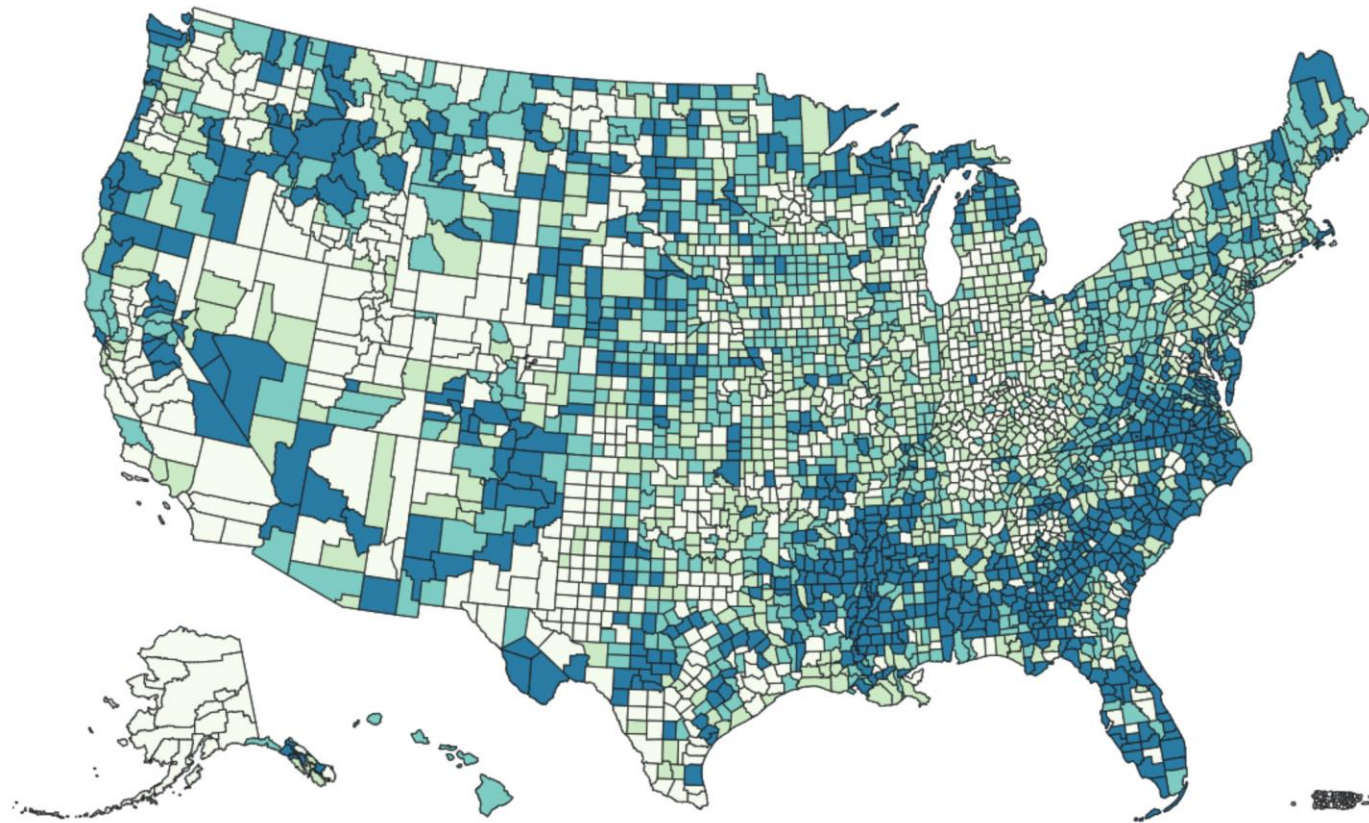

Leading cause of blindness in African Americans

6x more likely to result in blindness than in European Americans (Siegfried & Shui, 2022)

Risk Factors for Glaucoma

<u>Risk Factors</u>
Family history
Male sex
High IOP
High blood pressure
Can develop secondary to diabetes and hypothyroidism

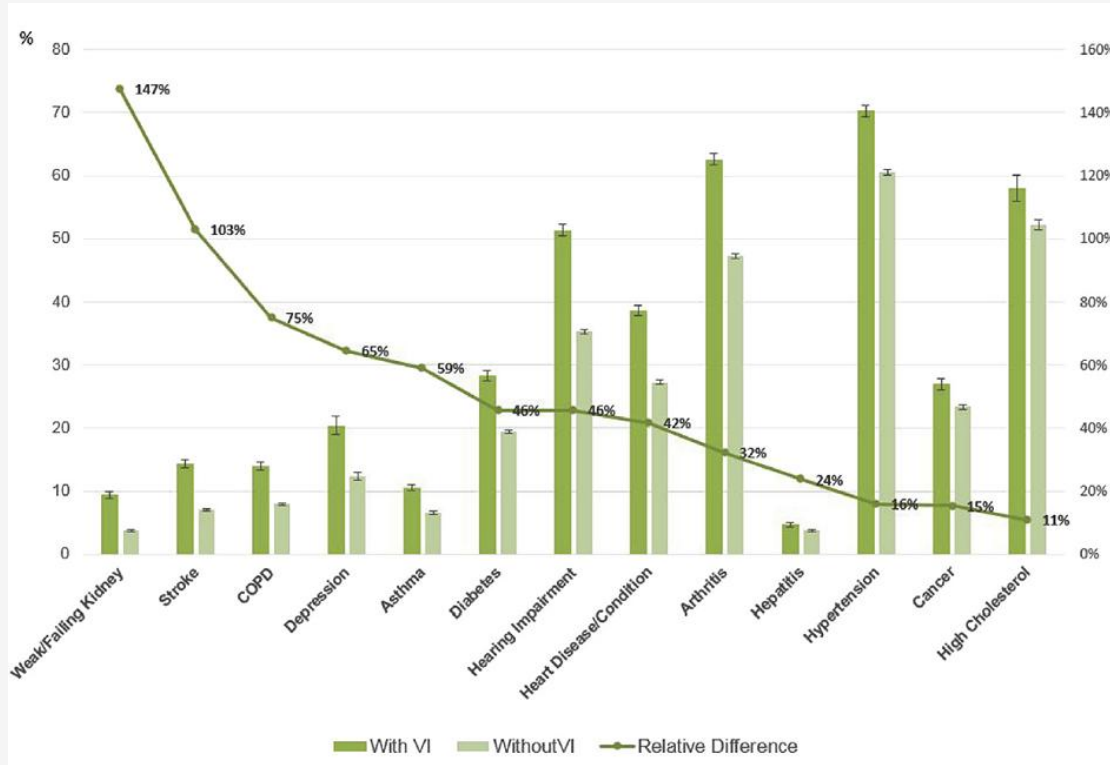

Legend

○ 0.14 - 0.42

● 0.47 - 0.53

● 0.42 - 0.47

● 0.53 - 1.08

(Crews et al., 2017)

- 1 in 4 adults with general vision impairment report psychological distress.
- Rates of falls double when you have a vision impairment.
- 1 in 4 adults over 65 experience a fall, the leading cause of injury in older adults.
- In 2017, the total U.S. economic burden of vision loss and blindness was \$134.2 billion.

The Most Common Eye Diseases: NEI Looks Ahead

Between 2010 and 2050, the estimated number of people affected by the most common eye diseases will double.

AGE-RELATED MACULAR DEGENERATION

CATARACT

DIABETIC RETINOPATHY

GLAUCOMA

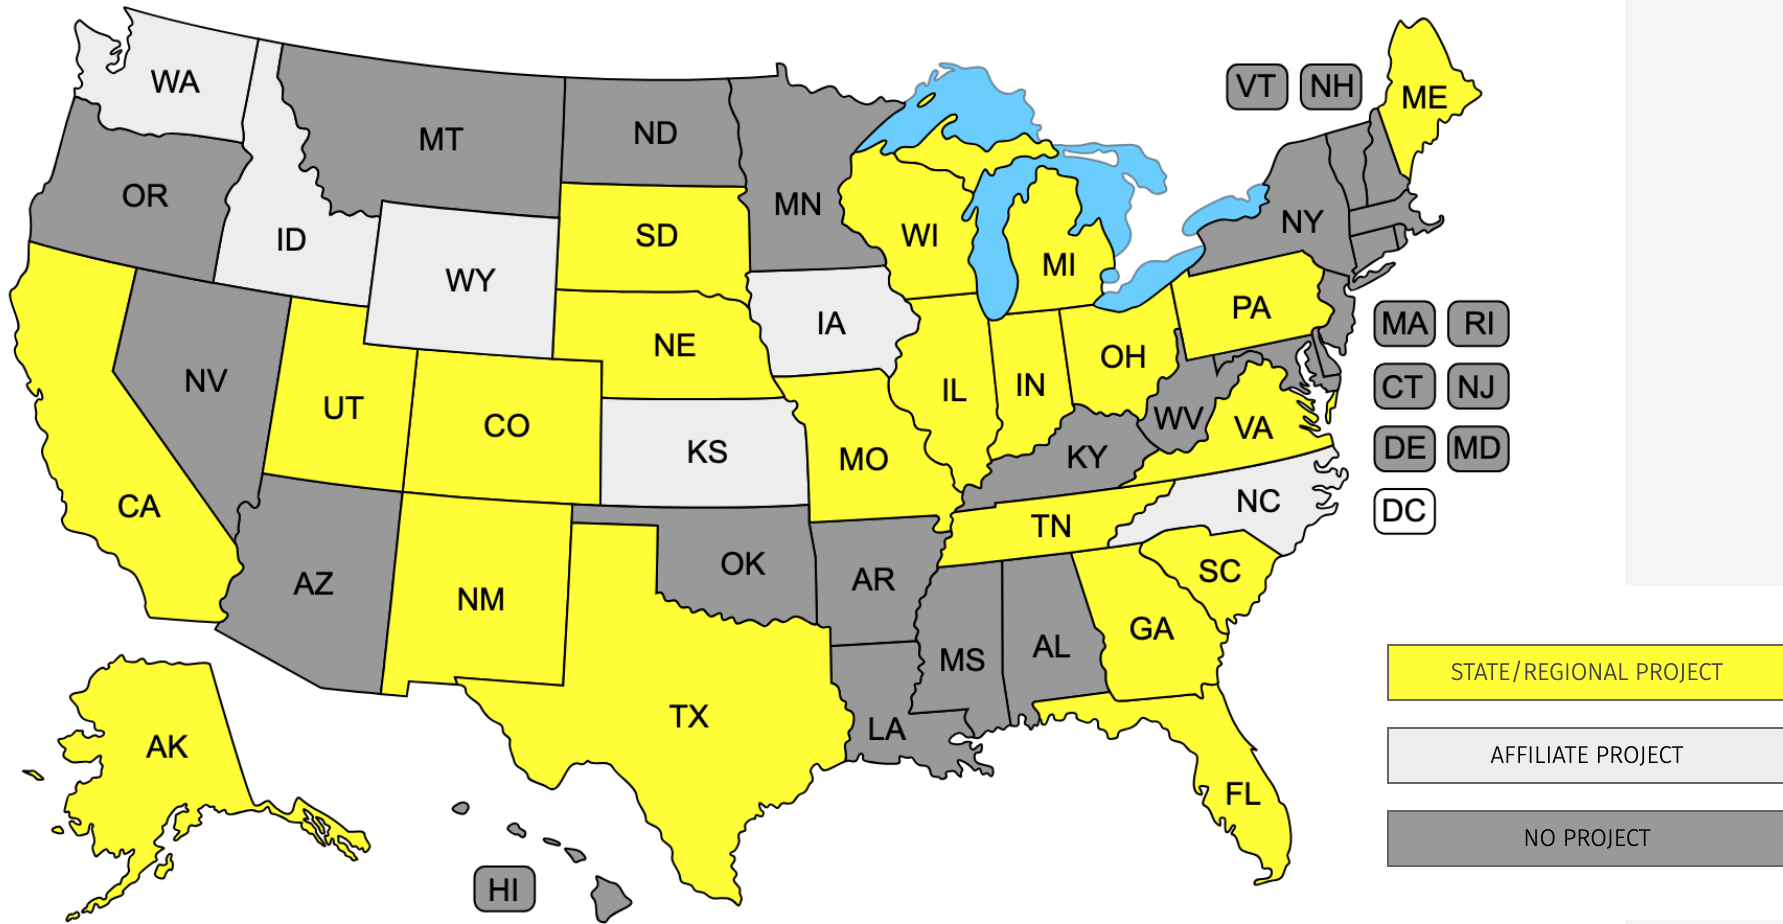

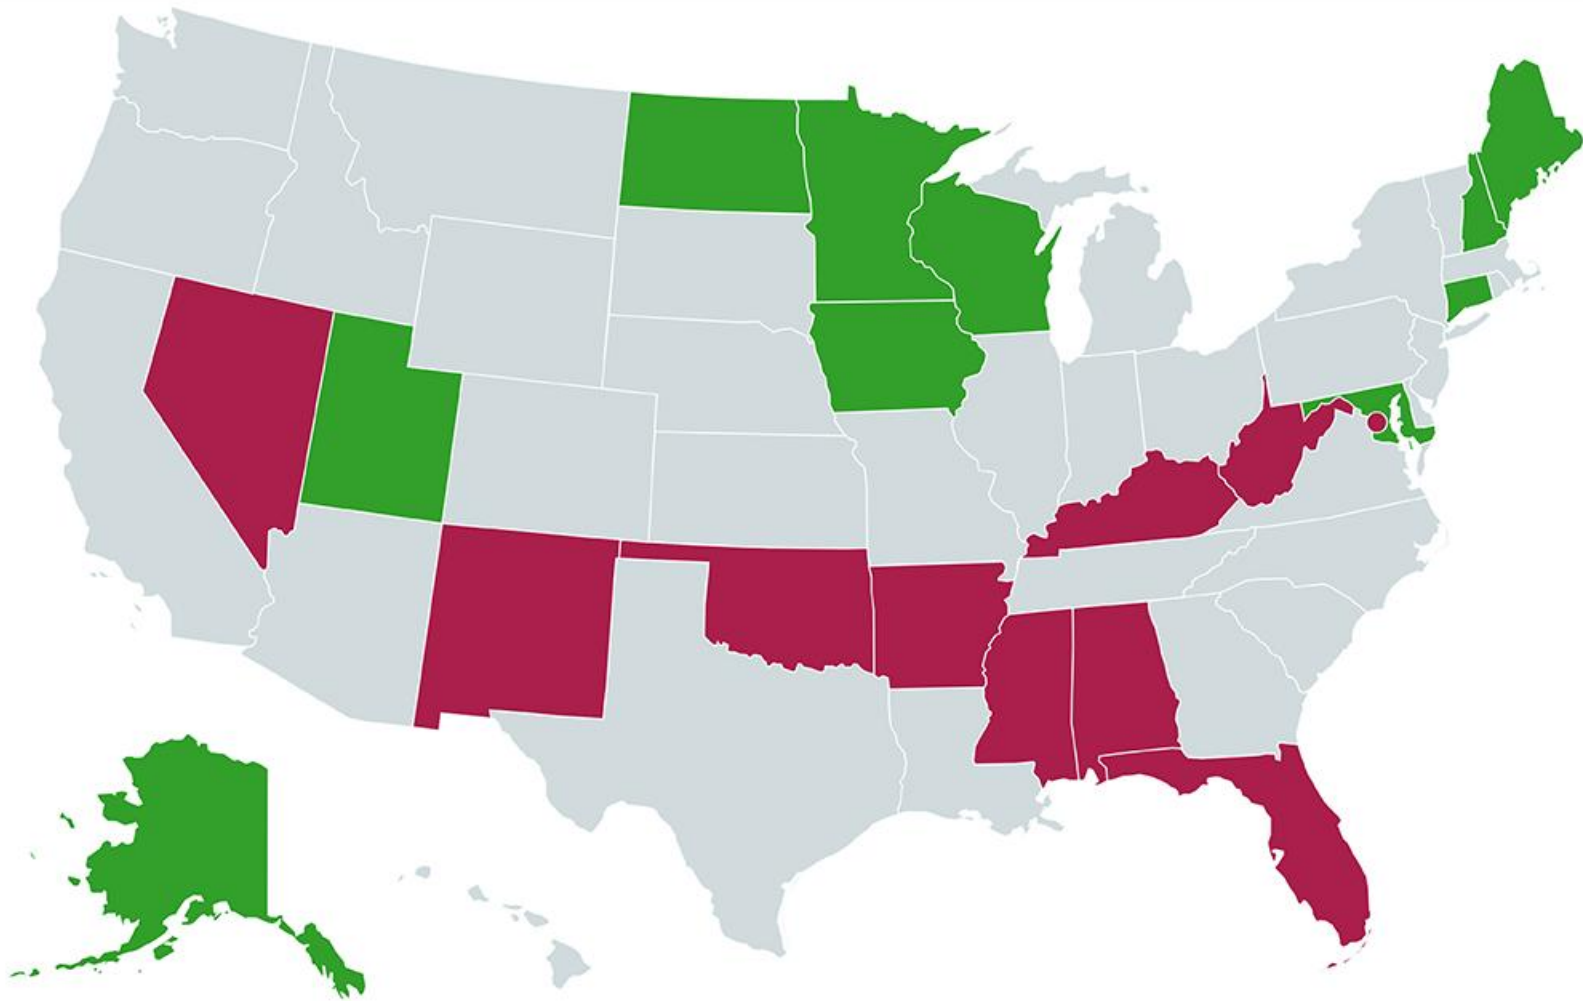

Each eye represents a total of 80 million people, the estimated number of Americans who will be 65 and older in 2050, the population most affected by these diseases.

For more information on eye disease, visit <http://nei.nih.gov/health>.

(Rowe, et al., 2019)

(Centers for Disease Control and Prevention, 2018)

Now for some strategies...

CHOOSING THE RIGHT COLOR

SOFT WHITE 2700K

Standard Color of
Incandescent Bulbs

BRIGHT WHITE 3000K

Great for Living room
and Bedroom

DAYLIGHT 5000K

Ideal for Kitchen, Bathroom
and Laundry Room

Not all light is
created the same.

Contrast

Contrast

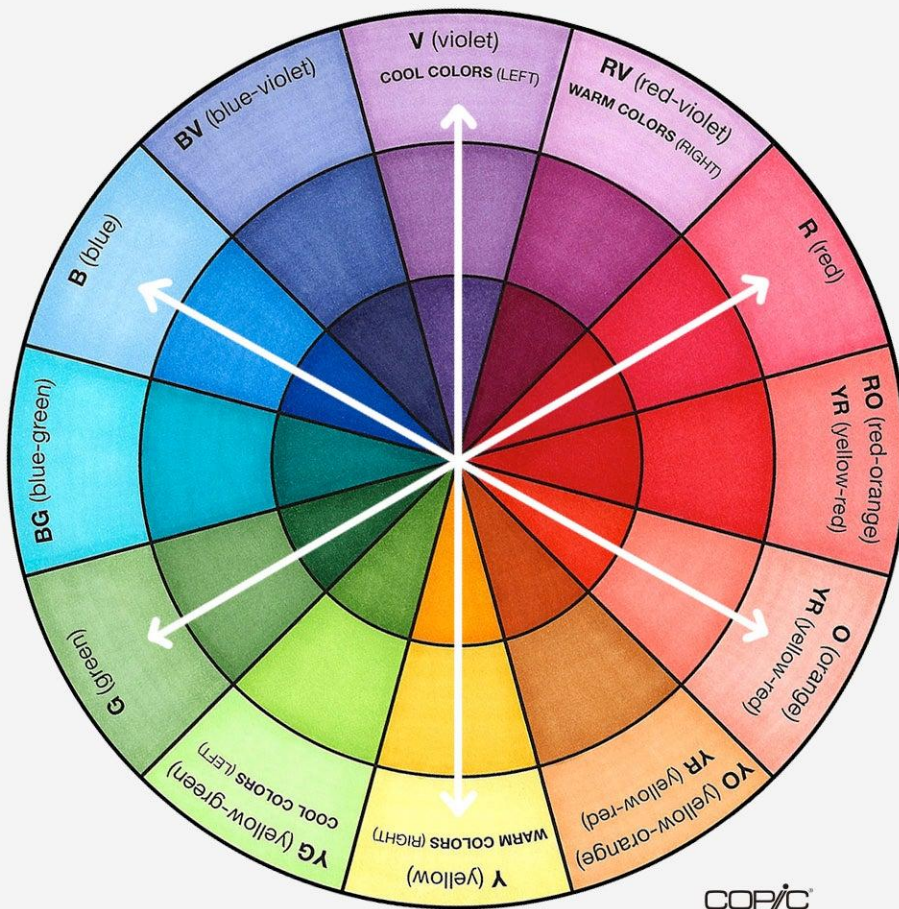

Complementary

Complementary colors are directly across from each other on the color wheel.

These can be any two colors, but it's most commonly seen between primaries and secondaries. Below are some examples in reference to Copic markers.

- | | |
|-------------------------------|--------------|
| Blue and Orange | (B14, YR15) |
| Blue-Violet and Yellow-Orange | (BV13, Y35) |
| Violet and Yellow | (V05, Y17) |
| Red-Violet and Yellow-Green | (RV06, YG07) |
| Red and Green | (R43, G12) |
| Red-Orange and Blue-Green | (R05, BG05) |

Colored Filters

- Can reduce glare.
- Heighten color discrimination.
- Reduce headache.
