<https://www.bemyeyes.com/>

Smartphones offer very practical assistive technology options for agriculture workers with low vision. Apps can be used to navigate the phone by voice, identify weeds in a field, insects in an orchard, and even people visiting your farm. Bring your phones to learn how to use these apps with Jason Barber, a low-vision beef farmer, who uses them to manage his herd successfully. See more of his farming blind content by subscribing at <https://www.youtube.com/@jasonbarber5643> !
